Section 1

Introduction

RMT, Inc. (RMT), has been retained by the Lemberger Site Remediation Group (LSRG) to operate and maintain the environmental remediation facilities at the Lemberger Landfill, Inc. (LL), and the Lemberger Transport & Recycling, Inc. (LTR), Superfund Sites in Whitelaw, Town of Franklin, Wisconsin. In February 1997, final (revised) Operation and Maintenance (O&M) Plans were submitted by RMT for the LL Remedial Design/Remedial Action (Operable Unit 1) and the LTR Site (Operable Unit 2). An O&M Plan Addendum was also included in O&M Progress Report No. 7 submitted in September 2000, pertaining to the preventive maintenance program for the leachate withdrawal wells. This O&M Progress Report No. 19 is intended to fulfill part of the reporting requirements specified in those plans. It is supplemented by other submittals associated with the operating period addressed in this Progress Report (July 2008 through June 2009).

Section 2

Activity This Period

This section describes the primary technical and administrative activities conducted on the project during this reporting period.

2.1 Site Work

The following routine operational tasks were completed during this period:

- Leachate was routinely removed from the three collection tanks and hauled off-site for treatment through the end of 2008. In accordance with the LL Workplan (RMT, 2008b), the leachate extraction system was shut down in December 2008, and the leachate tanks were emptied in January 2009.
- Routine quarterly and annual leachate sampling was performed through the end of 2008, in accordance with approved workplans. Leachate sampling was suspended in 2009 in accordance with the LL Workplan (RMT, 2008b).
- Routine annual landfill gas sampling was performed, in accordance with approved workplans.
- Sampling of groundwater monitoring wells and residential wells was performed in accordance with the approved Interim Groundwater Monitoring Program.

The following maintenance tasks were completed during this period:

- Grass was mowed at the LL and the LTR sites, as necessary.
- The pumps in the leachate withdrawal wells at the LL were pulled, inspected, and cleaned in July, September, and November 2008.
- New pump heads were installed at leachate withdrawal wells LW-4, LW-5, LW-6, and LW-7 on August 20, 2008.
- In accordance with the USEPA-approved MNA Workplan, the pump-and-treat system was operated for a brief time on a quarterly schedule to ensure functionality of the system. On August 21, 2008; October 8, 2008; January 28, 2009; and April 30, 2009, the air stripper blowers and extraction wells were turned on. Approximately 15,000 gallons of groundwater were pumped from the extraction wells on each of the above-listed dates, and an effluent sample was collected prior to turning the system back off.

2.2 Monitoring Program Modifications

In accordance with the LL Workplan (RMT, 2008b), the leachate extraction system was turned off in December 2008 to initiate the leachate head demonstration project. Prior to the system shut down, water levels were measured at all of the site extraction wells, groundwater monitoring wells, observation wells, and leachate head wells on a monthly basis. Monthly water level monitoring at all of the site wells continued after the system shut down; in addition, water levels have been recorded at a subset of 15 LL wells on a biweekly basis since December 2008. Leachate sampling has been suspended during the leachate head demonstration project. Leachate was last sampled on October 8, 2008.

Two new deep monitoring wells (RM-207XXD and RM-208XD) were installed at the site in September 2008 in accordance with the Supplemental Workplan for Deep Monitoring Well Installation submitted in December 2007. These wells have been added to the routine quarterly and annual groundwater monitoring program as specified in the approved Interim Groundwater Monitoring Program (RMT, 2008a).

2.3 Sampling Events

On August 28, 2008, RMT, on behalf of the LSRG, proposed an interim groundwater monitoring program for the time period between the end of the MNA pilot study and the approval of a new groundwater monitoring program that will include a long-term groundwater monitoring program (RMT, 2008a). The proposed interim monitoring program was approved with modifications on September 17, 2008, and the interim monitoring program was implemented beginning in September 2008. Data collected during the interim groundwater monitoring program have been submitted to the agencies quarterly, as summarized in Subsection 2.4 of this report.

The sampling events performed during this reporting period are summarized in Table 1. The schedule of groundwater and residential well sampling followed the schedule in the USEPA-approved Interim Groundwater Monitoring Program.

2.4 Deliverables, Correspondence, and Meetings

The major deliverables and correspondence that occurred during this period are listed chronologically below.

July 29, 2008	RMT receives a Letter from Mr. Richard Boice (USEPA) regarding Deeper Monitoring Well Installation, Lemberger Transport and Recycling Site
---------------	--

July 11, 2008 RMT sent a Response to USEPA's Comments Related to the Supplemental Workplan for Deep Monitoring Well Installation, Revision 0, December 2007, Letter to Mr. Richard Boice (USEPA).

August 8, 2008 RMT sent a Transmittal of Data - Residential, Plume Monitoring and Background Wells, First Quarter 2008 to Mr. Richard Boice (USEPA).

August 11, 2008 RMT sent the Monitored Natural Attenuation Status Report No. 3 to Mr. Richard Boice (USEPA).

August 25, 2008 RMT sent Discharge Monitoring Reports to Mr. David Gerdman, Wisconsin Department of Natural Resources

August 28, 2008 RMT sent a letter to Mr. Richard Boice (USEPA) proposing an Interim Groundwater Monitoring Program for the Lemberger Landfill Sites.

September 17, 2008 Mr. Richard Boice (USEPA) sent an e-mail to Mr. Kristopher Krause (RMT) approving the Interim Groundwater Monitoring Program with modifications.

October 21, 2008 RMT sent the Workplan for the Lemberger Landfill Water Level Head Demonstration Project to Mr. Richard Boice (USEPA).

December 11, 2008 RMT sent a Transmittal of Data - Residential, Plume Monitoring and Background Wells, Second Quarter 2008 to Mr. Richard Boice (USEPA).

December 12, 2008 RMT sent the Deep Monitoring Well Installations Report to Mr. Richard Boice (USEPA).

January 7, 2009 RMT sent the O&M Progress Report No. 18 - Lemberger Landfill Sites to Mr. Richard Boice (USEPA).

February 26, 2009 RMT sent a letter report Documentation of Investigative-derived Wastes from the Deep Well Installations at the Lemberger Transport and Recycling, Inc. Site Letter to Richard Boice (USEPA).

March 4, 2009	RMT sent a letter Summary of Groundwater Pump and Treat Remedy and Evaluation of Source Control Alternatives to Richard Boice, USEPA
March 20, 2009	RMT sent Discharge Monitoring Reports to Mr. David Gerdman, Wisconsin Department of Natural Resources
April 13, 2009	RMT receives a letter Review of Summary of Groundwater Pump and Treat Remedy and Evaluation of Source Control Alternatives Memorandum from Richard Boice, USEPA.
April 16, 2009	RMT sent a Transmittal of Data - Residential, Plume Monitoring and Background Wells, Third Quarter 2008 to Mr. Richard Boice (USEPA).
April 17, 2009	RMT sent a Letter Report – Responses to February 19, 2009 EPA Letter Regarding the LTR Monitored Natural Attenuation Summary Report to Mr. Richard Boice (USEPA).
May 4, 2009	RMT received a memorandum from Mr. Richard Boice (USEPA) with Requested Additions/Corrections to the LTR MNA Report.
May 12, 2009	Jim Walden (WDNR) sent Notification of Analytical Results for Residential Wells Sampled by RMT during October 2008 to Mr. Richard Boice (USEPA).
May 29, 2009	RMT sent a Letter Report – Hydraulic Containment Assessment Lemberger Transport and Recycling, Inc. Site to Mr. Richard Boice (USEPA).
June 4, 2009	RMT received a Letter from Richard Boice, USEPA regarding Lemberger Transport and Recycling Site (LTR) Monitored Natural Attenuation (MNA) Summary Report
June 17, 2009	RMT sent a Transmittal of Data - Plume Monitoring Wells, Fourth Quarter 2008 to Mr. Richard Boice (USEPA).

2.5 Contacts with Local Community

Contacts with the local community occurred during the regular sampling of private wells (by RMT), and by means of the transmittals of the laboratory results to the well owners by the WDNR. Mark Brooks of RMT also continued to participate in the Friends of the Branch River Watershed organization.

2.6 Unresolved Delays or Areas of Concern

Several maintenance and repair tasks were necessary during this period, but no delays or areas of concern remain unresolved.

2.7 Personnel Changes

No personnel changes have occurred during this reporting period.

Section 3

Leachate and Landfill Gas Collection Systems

3.1 Leachate/Groundwater Elevation Measurements

On October 23, 2007, RMT, on behalf the LSRG, submitted to the USEPA the Leachate Head Evaluation Report for the Lemberger Landfill (RMT, Inc., 2007). The leachate head evaluation included hydrographs showing the leachate/groundwater head levels at leachate head/extraction wells and an evaluation of the hydrodynamics of leachate head and groundwater. A discussion of leachate levels among the LSRG, RMT, the WDNR, and the USEPA at a site meeting in July 2008 resulted in the development of a mutually-agreeable decision to develop a workplan for a leachate/groundwater head level demonstration study. An updated discussion of leachate/groundwater levels at the LL is contained in that workplan (RMT, 2008b).

The LL workplan (RMT, 2008b) responds to recommendations made in the October 2007 Leachate Head Level Report (RMT, 2007), and outlines a 1-year demonstration project in which the leachate extraction system at the LL will be turned off, samples of leachate/groundwater will be collected from the leachate head wells, and head levels in the leachate head wells will be frequently measured. The purpose of the project is to evaluate the response of leachate/groundwater head levels without operation of the leachate extraction system. The workplan was implemented beginning in December 2008, and data were collected through December 2009. During the demonstration project, leachate/groundwater levels have been monitored every 2 weeks following shutdown of the leachate extraction system. A report evaluating the results of the demonstration project is being prepared concurrently with this Progress Report, and will include updated hydrographs, analytical results, and a detailed evaluation of leachate head levels.

Appendix A of this Progress Report contains a tabular summary of the leachate head levels for the reporting period. Refer to the Leachate Head Evaluation Report for the Lemberger Landfill (RMT, Inc., 2007) for an extensive assessment of leachate head levels. Historical leachate head data is included in Attachment 1.

3.2 Volume of Leachate/Groundwater Removed

A plot of the volume of leachate/groundwater removed from beneath the Lemberger Landfill from initial system startup (March 1997) through June 2009 is shown on Figure 1. The leachate extraction system was shut down in December 2008. The volume of leachate/groundwater

removed from July 2008 through December 2008 was 207,000 gallons. This compares to a total of 605,540 gallons that were removed during the previous reporting period (July 2007 through June 2008). The total volume removed from startup through December 2008 is 7,996,958 gallons.

The recorded volume of leachate/groundwater removed from the LL is based on the number of truckloads hauled per month, rather than on a daily flow totalizer for the leachate withdrawal (LW) wells. This type of measurement results in the short-term fluctuations in the data plotted on Figure 1. The existing LW wells have been nearly 100 percent operational from system start up in May 2000 through December 2008.

3.3 Leachate/Groundwater Quality

Table 1 shows the leachate sampling dates for this reporting period. Due to the ongoing leachate head demonstration project, samples of the composite leachate/groundwater (leachate influent) were collected in only 2 quarters during this reporting period (August and October 2008). Appendix B contains a tabular summary of constituents (field parameters, metals and VOCs) that have been detected in samples of the composite leachate/groundwater samples. During this reporting period, part per billion (ppb) level and sub-ppb level concentrations of several VOCs, SVOCs, and metals were detected in the leachate/groundwater samples, including TCE breakdown products (e.g., vinyl chloride). The results are typical of landfill leachate. Trichloroethene (TCE) and CVOC breakdown products (cis-1,2-dichloroethane [cis-1,2-DCE]; vinyl chloride, 1,1-dichloroethane [1,1-DCA]; and chloroethane) have been detected in the historical leachate/groundwater influent samples.

Trichloroethene (TCE) and CVOC breakdown compounds have also been detected in samples of leachate/groundwater that are collected from the shallow monitoring wells. Table 2 lists the VOCs that were detected during the reporting period at concentrations greater than ch. NR 140 Preventive Action Limits at the shallow wells.

As a part of the Leachate Head demonstration project, discrete samples of the leachate/groundwater were collected from each of the leachate head ("LH") wells prior to shutting down the leachate extraction system in December 2008. Appendix B contains a tabular summary of the constituents detected in the discrete leachate/groundwater samples. Acetone, benzene, chlorobenzene, cis-1,2-dichloroethene, and vinyl chloride were detected in the leachate head well samples at wells LH-1, LH-2B, LH-3, and MW-15R. The remaining leachate head wells (LH-4, LH-5, LH-6, LH-7, and MW-14R) did not contain enough water to sample.

3.4 Operating Status of LW Well Pumps

During the current reporting period, the system of eight leachate withdrawal (LW) wells was operational nearly 100 percent of the time through December 2008. The nonfunctional downtime of the individual LW wells during this period was intentional, resulting from scheduled maintenance and cleaning of the LW pumps, and was limited to only a few hours for each well that was serviced.

3.5 Operating Status of the Groundwater Treatment System

The groundwater treatment system was operated for a brief time on a quarterly schedule during this reporting period. On August 21, 2008; October 8, 2008; January 28, 2009; and April 30, 2009, the air stripper blowers and extraction wells were turned on. Approximately 15,000 gallons of groundwater were pumped from the extraction wells on each of the above-listed dates, and an effluent sample was collected prior to turning the system back off. Table 1 shows the schedule for effluent sampling. Appendix C contains a tabular summary of constituents detected in the effluent samples during this reporting period. Historical effluent data are included in Attachment 1. The effluent sampling data indicate that the groundwater treatment system is operating as designed.

3.6 Landfill Gas

This subsection includes an evaluation of landfill gas monitoring results at the LTR for the current reporting period. Gas monitoring at the LL has been completed, per the approved O&M Plan.

3.6.1 Monitoring Data

Monitoring of the landfill gas management system for the LTR, including gas vents and probes, was performed on November 11, 2008. Gas monitoring was conducted for methane, oxygen, non-methane volatile organic compounds (NMVOCs), and gas velocity. The gas monitoring data sheets for the reporting period are provided in Appendix D. Gas monitoring results at the LTR for this reporting period showed no detections of NMVOCs or methane in the gas vents and probes. Attachment 1 includes a tabular summary of historical gas monitoring results.

3.6.2 Gas Migration Assessment

Off-site landfill gas migration does not appear to be occurring at the LTR, based on the monitoring of gas probes and vents around the site. The absence of methane detected within the landfill limits indicates that landfill gas is not being produced, or that it is being produced in extremely small quantities. No pressure buildup within the landfill is

occurring, indicating that the gas venting system is working as designed. Consequently, the risk to human health and welfare associated with gas migration remains minimal.

No other actions are warranted at this time, based on the above assessment of the extent and significance of gas migration.

MW-15R	18-Jun-09	831.04	840.5	-9.46

Notes:

- (1) Bottom of waste elevations are approximate for "LH" wells.
- (2) Negative values indicate that the liquid level is below the bottom of waste.
- (3) NA = not applicable; no waste was encountered in drilling of well.

Appendix B
Tabular Summary of
Historical Leachate Quality - Detections Only

Leachate Results - Detections Only
Lemberger Landfill

GW-9	NR	NR	NR	NR	NR	NR	NR	NR	NR

Instrument(s) used (brand, model): Landtec GA-90 Gas Analyser, DA 4000 Digital Anemometer, 580 OVM/Datalogger, MINIGAS Multi Purpose Gas Monitor

Calibration gases and their concentrations: Zero Air, Carbon Dioxide 15%, & Methane 15%

ADDITIONAL COMMENTS:

Gas vents (GVs) and gas probes (GPs) are located at the LTR. Gas wells (GWs) are located at the LL.

NR = No reading taken. (Gas monitoring at the LL has been completed, per the approved O&M Plan.)
